PROFILE

Flutter Developer with hands-on experience in building, integrating, and deploying real-world mobile applications. Strong expertise in Flutter, Dart, Core Java, REST API integration, MySQL, and modern state management using BLoC and GetX. Currently working on live projects with deployment experience on Google Play Console and Apple App Store.

PROFESSIONAL EXPERIENCE

Bringletech, Flutter Developer 05/2025 – Present | Mohali, India

- Developed scalable and responsive cross-platform mobile applications for Android and iOS using **Flutter and Dart**.
- Designed and developed reusable, **responsive UI components** aligned with **Material Design** guidelines for a consistent user experience.
- Integrated **REST APIs** for dynamic data handling and real-time updates.
- Integrated **Google Maps** to enable real-time location tracking, route visualization, and place search functionality.
- Managed application state efficiently using **GetX** and **BLoC** to ensure scalable and maintainable app architecture.
- Implemented **Firebase Cloud Messaging (FCM)** to deliver push notifications across foreground, background, and terminated app states on Android and iOS.

EDUCATION

Bachelor of Computer Applications (BCA), PGGC-11, Chandigarh - Panjab University 2025

TECHNICAL SKILLS

Languages: Dart, Core Java, Flutter, BLoC, GetX, MySQL, OOPS

Tools & Version Control: Git, GitHub, Android Studio, VS Code, Postman, Thunder Client

PROJECTS

DARZI - Tailor Booking Application, (Live on Google Play Store)

- Developed product listing, cart management, and order placement features to support a smooth end-to-end shopping flow.
- Implemented secure user authentication and profile management to ensure safe and personalized user access.
- Integrated Razorpay payment gateway to enable secure and seamless online transactions.
- Integrated real-time chat functionality to enable seamless communication between vendors and customers.
- Optimized UI performance and implemented responsive design to ensure a smooth experience across Android and iOS devices.

FREQUIP - Furniture Management Application, (Live on Google Play Store & Apple App Store)

- Implemented product listings, detailed item views, and booking workflows for furniture rental services.
- Integrated REST APIs to manage dynamic product data, bookings, and order workflows.
- Designed responsive and user-friendly interfaces following Material Design principles.
- Implemented secure user authentication and profile management for personalized user access.
- Optimized application performance to deliver a smooth experience across Android and iOS devices.
- Deployed and published the application on Google Play Store and Apple App Store.

HRMS JALPAY - Water & Sanitation Meter Rating System, (Live on Google Play Store)

- Designed and implemented digital bill generation and payment tracking features for efficient billing management.
- Integrated backend services and developed modular UI components to improve scalability and maintainability.
- Built a consumer data management system with search functionality and billing history tracking.
- Implemented role-based login to ensure secure access control for different user types.
- Optimized app performance to ensure smooth and reliable operation in field conditions.
- Deployed and published the application on Google Play Store.

TrollX – Ride-Hailing Platform, (TestFlight, UAT)

Customer App

- Developed a ride booking system with real-time driver tracking using Google Maps.
- Implemented ride request, fare estimation, and trip history features to support the complete ride flow.
- Integrated payment gateway and wallet functionality for secure and seamless transactions.
- Managed application state using GetX to deliver a smooth and responsive user experience.

Driver App

- Built ride request acceptance and rejection flow with live timer handling for driver-side ride management.
- Implemented real-time location updates and navigation support for accurate driver tracking.
- Developed earnings dashboard and ride history management to help drivers track income and completed rides.
- Optimized background location services to improve tracking accuracy and app performance.

Fleet / Admin Panel

- Designed a fleet management system to efficiently handle multiple drivers and fleet operations.
- Implemented driver onboarding, approval workflows, and ride monitoring system for smooth fleet administration.
- Built an analytics dashboard to track ride statistics, revenue, and operational performance.
- Managed role-based authentication and secure access control for different admin and fleet user roles.
